Sierra

REFRIGERATION SYSTEMS 1/2 THROUGH 30 HP AIR & ELECTRIC DEFROST

Sierra, a new concept in 1/2 through 30 HP refrigeration systems.

Features:

- Increased energy savings
- Increased capacity
- Built-in liquid refrigerant sub cooler
- Built-in refrigerant charging gauge
- Increased condenser surface
- Reduced refrigerant charge
- Extended compressor life
- Floating head pressure systems

Sierra™

The **Sierra™** system is ideal for a variety of commercial applications such as convenience stores, restaurants and fast food outlets. **Sierra's** substantial savings in operating costs make it the **right choice** for commercial warehouses.

Sierra™ offers a winning combination of energy savings, lower installed costs, and increased reliability. Models are available from 1/2 to 30 horsepower in low, medium, and high temperature ranges. Systems are available with HCFC R-22 and environmentally friendly HFC R-404A. All condensing units are intended for outdoor installation.

All **Sierra™** systems are shipped with piping accessories factory installed. This saves on installation time, and takes the guess work out of selecting components. **Sierra™** systems come complete with the following features and accessories:

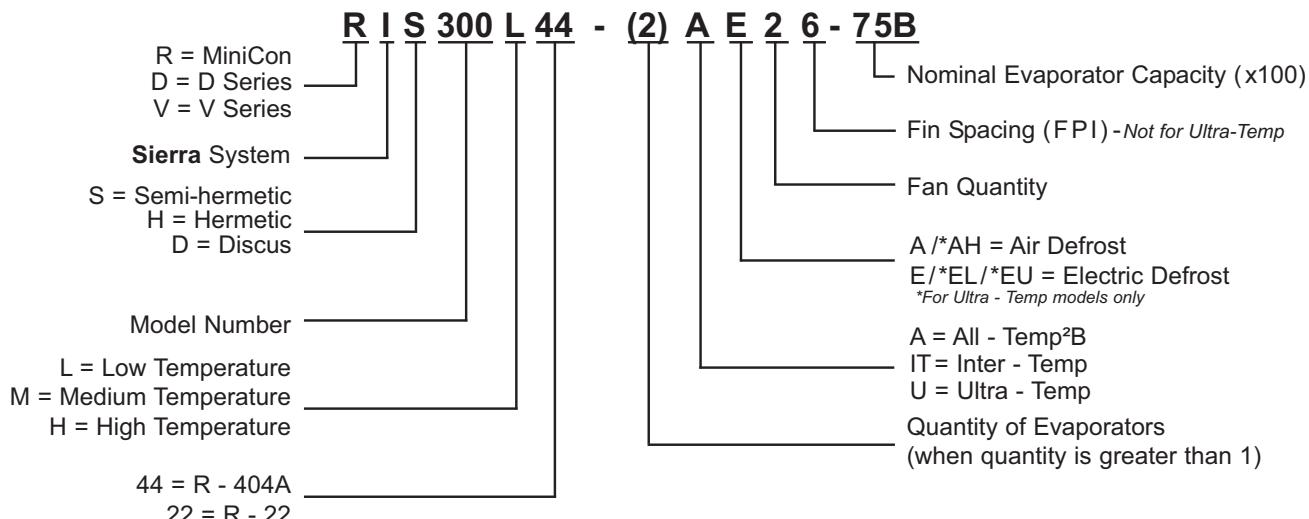

Standard Features

- Semi-hermetic, hermetic, discus, or Scroll compressors
- Oil pressure control where applicable
- High and low pressure controls
- Crankcase heater
- Low profile galvanized steel housing
- Copper tube, Aluminum fin condenser
- Vibrasorbers (semi-hermetic models only)
- Large electrical control panel
- Compressor contractor or start kit
- Liquid line charging valve
- Electric defrost provisions on low temp evaporator(s)
- Specially sized balanced port expansion valve(s) (mounted)
- Liquid solenoid valve(s) (mounted)
- Room thermostat
- Liquid line filter-drier (mounted)
- Sightglass with moisture indicator (mounted)
- Suction line filter (mounted)
- **Russ Saver™** floating head pressure control
- Liquid refrigerant subcooling circuit
- Fan cycle control (dual fan condensing unit only)

Options

- Copper finned condenser and evaporator coils
- Coated condenser coils
- Suction accumulator
- Oil separator
- Air defrost time clock
- PSC evaporator fan motors
- Adjustable defrost control

MODEL NUMBER NOMENCLATURE

SIERRA

What is Sierra™?

Sierra™ is a unique concept in commercial refrigeration that incorporates a number of features which enhance performance, provide energy savings over conventional systems and increase of reliability, thus saving you money.

The heart of the **Sierra™** system is a design that eliminates the need for a refrigerant receiver by providing built-in storage capacity in the condenser section of the condensing unit. This small charge in the unit has opened the door for adding new features that are not possible with traditional refrigeration systems.

Increased Performance

Sierra™ maintains traditional refrigerant storage capacity while increasing the condenser capacity. It actually gives the same size condenser up to 20% more capability by providing a potential 50% increase in condenser surface. This feature reduces condensing temperatures when compared to conventional systems. In addition, **Sierra™** increases compressor life by reducing the operating head pressure.

Increased Energy Savings

The increase in the condenser size and lower operating head pressure provide an initial energy savings of up to 10%. In order to take full advantage of Sierra's large condenser, a subcooling section and **Russ Saver™** floating head pressure features are incorporated to save even more energy.

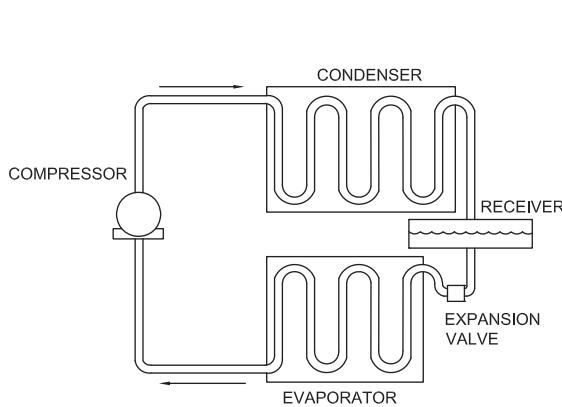

The **Russ Saver™** feature provides up to 30% in additional energy savings during low ambient conditions. Additionally, it also supplies subcooled liquid refrigerant to the expansion valve to maintain optimum valve performance. Thus, **Sierra™** can offer energy savings of up to 40% over conventional refrigeration systems. (See page 5 for calculation of Projected Monthly Savings.)

Less Refrigerant

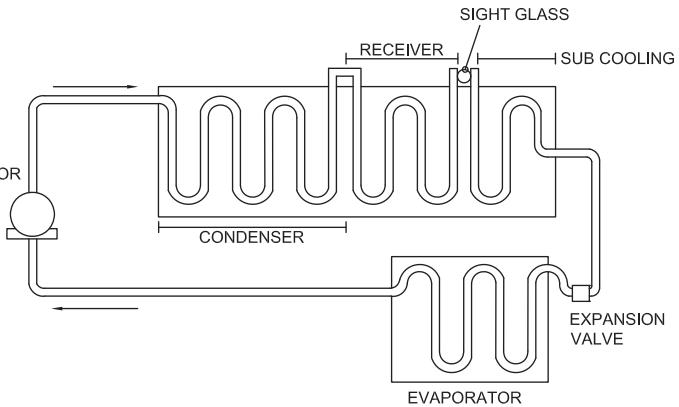

Sierra™ requires up to 20% less refrigerant to operate while maintaining continuous peak performance. This is accomplished several ways:

- 1) by dispensing with the conventional receiver, a minimum refrigerant charge is not required to maintain a liquid seal in the receiver.
- 2) by assuring that only liquid refrigerant is entering into the subcooler section of the condenser because ambient air is flowing over the receiver section of the condenser coil.
- 3) by eliminating the useless overcharging of the system with refrigerant, often a result of varied industry practices. In typical systems, the receiver, its outlet valve and piping will create bubbles in the sightglass due to pressure drop they create.

This in turn results in the addition of extra refrigerant by the installer in an attempt to clear the sightglass. By eliminating the receiver and its piping components, the clearing of the sightglass occurs much faster. **Sierra's** critically positioned sightglass signals when the ideal charge has been attained, thus saving refrigerant. With today's refrigerant costs, **Sierra™** makes even more sense.

TRADITIONAL REFRIGERATION SYSTEM

SIERRA™ REFRIGERATION SYSTEM

Sierra™

ENERGY SAVINGS CALCULATIONS

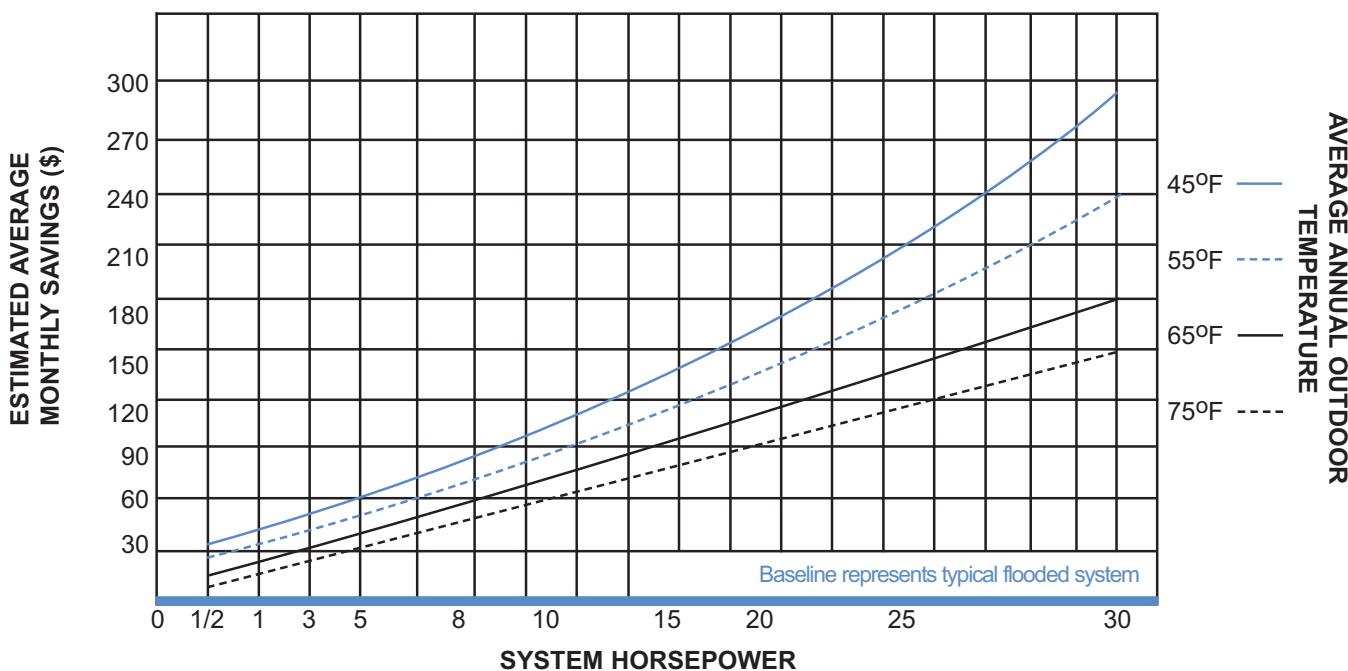

To estimate your average monthly savings:

- 1) Select a **SIERRA™** system that meets your refrigeration requirements.
- 2) Determine the Average Annual Outdoor Air Temperature from the table below.
- 3) Using the Projected Monthly Savings graph, locate the system nominal horsepower at the bottom of the graph (the nominal system horsepower can be derived from the model number nomenclature).
- 4) Go straight up to the appropriate Average Annual Outdoor Air Temperature curve, and then go horizontally to the left to determine your Estimated Monthly Average Savings.
- 5) To calculate your Estimated Monthly Saving for an energy cost other than \$0.10 KWH, divide the Estimated Monthly Savings by 0.10 and multiply by your local electric utility rate.
- 6) To determine your Estimated Yearly Savings, multiple the Estimated Monthly Savings number by 12.

* 230/3/60 heaters are standard on these models. Heaters are wired single phase for all other models.

460/1/60 motor amps = 1/2 the 230/1/60 value.

All models require externally equalized expansion valves.

Replace* with A for air defrost (UAM) or E for electric defrost (UEM). Heater amps apply to electric defrost models only.

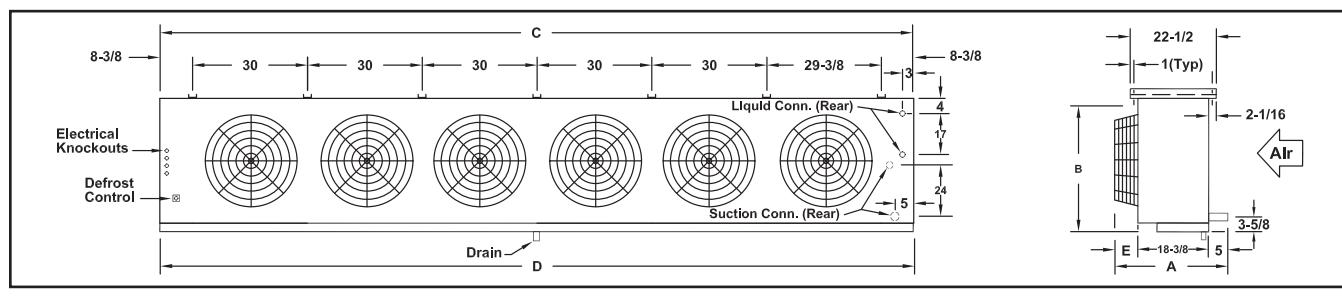

† Single phase motors delta wired for 3 phase power connection. Inherent 3 phase motors are available at extra cost.

‡ Connection sizes and quantity are subject to change based upon actual operating conditions. Contact Application Engineering.

*MCA = Minimum Circuit Ampacity

MOPD = Maximum over current protection

Low temp models include maximum evaporator fan load allowance.

Medium temp models do not include evap fan allowance. Contact Application Engineering for data if used with electric defrost evaps.
